Kris Gospodinov

Objective

I got interested in programming 8 months ago and it instantly became my passion. I have completed several online courses on Javascript, HTML, CSS and Web Development and after that I started studying Node.js and Express and understanding how the backend works. After completing a few full stack projects I wanted to be able to create a more complicated and responsive front-end and for the last 2 months I have been studying React and practicing with simple programs.

Skills and Strengths

Javascript, Node.js, Express.js, React, MongoDB with Mongoose, HTML/CSS/EJS, JWT Authentication and cookies, MVC Approach

I believe that my most important strengths are that I am fast-learner and that I have good interpersonal and teamwork skills.

Employment History

I have worked over 2 years in my life and my most significant job experience is in E-commerce with Amazon and eBay.

Projects

Node.js CRUD Application
- Simple Blog Website
- Connected to MongoDB database where the blogs are stored
- With dynamic front-end content using the EJS View Engine
- Create-Read-Update-Delete

JWT Authentication Website
- Connected to database to store users.
- JSON Web Token used for user authentication with user and admin check.
- User-only and Admin-only paths

Socket.io Real Time Chat App
- A really simple app using socket.io for bidirectional communication.

CRUD React Blog with local json database
- Blog website that uses local json-server for the backend.
- With reactive frontend, custom components and simple CSS.
